## Back To Roofing School - Common Terminology

For any property owner, at some point, roofing work will become necessary. And before that time comes for your roof, be sure to learn some of the more common and important roofing terms so that you can clearly and efficiently communicate and understand the work your roof requires.

### Terms to Know for Repair Purposes

Because your roof remains exposed to the elements at all times of the day and night, it will inevitably suffer wear and damages. And those damages can affect a number of your roof's major components. You might know these components by look but not by name, so to give your roofing contractor an accurate description of your roofing troubles, take a minute to learn those names:

- *Flashing*: Material used throughout your roof in key places to prevent leaks
- *Eaves*: The edge of a roof that often overhangs beyond a house's edge
- *Joist*: An upright structure that sheathing is nailed above (in flat roofs only)
- *Soffit*: Boards that enclose the underside of your roof
- *Fascia*: The trim behind your gutters and eaves

### Terms to Know for Roof Installations

Whether you're building a new home or having the roof of your current home replaced, you will have to put some thought into getting a new roof. And to most effectively communicate your new roofing needs to your roofing contractor, familiarize yourself with these two important phrases:

- *Slope*: The angle of your pitched roof
- *Square*: One hundred square feet of roof
